

ABSTRACT OF THE DISCLOSURE

A chemical toilet comprising a housing having an aperture providing access to an interior compartment of the housing. The interior compartment of the housing accommodating a toilet with an opening communicating with a storage tank. An exterior wall of the housing having a recess pumping coupling and a lower portion of the storage tank having a tank pumping coupling and the recess and tank pumping couplings being interconnected with one another by a pumping conduit to facilitate pumping of human waste and liquid from the storage tank via the pumping conduit during servicing of the chemical toilet. At least one spray nozzle is located within the storage tank and a fresh water conduit interconnects the at least one spray nozzle with a supply of fresh water to facilitate spraying of the interior of the storage tank with fresh water during the pumping operation.
